RE: Application for RippleX Software Engineer Intern, Summer 2026

Dear Hiring Team,

I am a Computer Engineering co-op student at Toronto Metropolitan University applying for the RippleX Software Engineer Intern role for Summer 2026. I am excited by the chance to help scale and harden the XRP Ledger and to learn from your open-source community. Your focus on C++, performance, and reliability aligns with my background in systems work and my interest in blockchain infrastructure.

I build and test real-time software on Linux. On the Toronto MetRobotics team, I designed a multithreaded control system that handled user input, sensor data, and actuator commands in parallel, and I built TCP and WebSocket layers to stream telemetry with low latency. I also wrote a desktop GUI to visualize multi-camera feeds and system state, and I created CLI tools to orchestrate processes and logs. This taught me concurrency, fault tolerance, and careful debugging under load.

I am comfortable working close to the metal and in code review. At Momentum AI and Echolabs I shipped and maintained production services, wrote and reviewed pull requests, and used Git in an Agile team to plan, test, and release features. I built APIs in Python, tuned data pipelines with PostgreSQL and vector stores, and deployed with CI/CD, which sharpened my habits around tests, documentation, and performance. While those projects were Python-heavy, I study and use C++ in my coursework and projects and I want to apply it to resilient backend systems at Ripple.

The RippleX internship's scope matches what I enjoy: improving throughput and reliability, writing clear tests, and engaging with an open-source codebase and community. I am available for a 12-week term starting in May 2026 and intend to return to my degree after the internship. I would value the chance to contribute to a project with real economic impact and strong engineering standards.

Thank you for your time. I have included my contact details below and would welcome an interview.

Sincerely,
Syed Kaab Surkhi
